

## REPLACEMENT SHEET

## ABSTRACT OF THE DISCLOSURE

2  
a  
In a device for enveloping inserts in an envelope, first and second articles are supplied to a transporting device. An adhesive station with an applicator unit is arranged along the transport path of the transporting device and applies an adhesive onto the first article provided for forming an envelope. The first article forms the envelope without any waste being produced. The applicator unit is stationary so that during application of the adhesive onto the first article it is the first articles that is being moved in the transport direction. The second articles are folded and inserted into the envelope along the transport path.
